Biography

My research lies at the intersection of **Information Science, Education, and Psychology**. I apply mixed methods to explore the psychological aspects of PIM, focusing on the affective aspects of our interactions with information and PIM behavior during life transitions. I completed my PhD in Education at Tel Aviv University, following my Master's in Education Technologies and Learning Systems and my Bachelor's in Social Sciences and Humanities, both at The Open University of Israel.

Research Highlights: Affective Aspects of PIM

- Gaps between actual and ideal PIM behavior manifest in a complex and intense affective experience
- Links between feelings and behavior result in four types of PIM behaviors
- Elderly persons have decreased interest in PIM and mild affective experience

Current & Future Projects: PIM Behavior During Life Transitions

Project 1: PIM behavior during academic transitions among early-career researchers (in prep)

- Goals: Understand PIM challenges and practices, aiming to define best practices to manage information during life transitions
- Mixed methods: Phase 1 - semi structured interviews (n=15); Phase 2 - social network analysis
- Preliminary findings: Multiple PIM challenges during academic transitions; PIM practices as a coping mechanism when faced with transition-related challenges

Project 2: PIM behavior among the elderly in the post-pandemic era (future work)

- Goals: Understand PIM experiences and long-term information preservation, aiming to define best practices to manage information during the third phase of life
- Mixed methods
