

Sascha Donner, LL.M.

PhD student, Humboldt-
Universität zu Berlin, Germany

Founder EVANA.AI

Berlin, Germany

SCAN ME

I'm a Ph.D. student in the Department of Information Science at the Humboldt University of Berlin (HU).

Before coming to HU, I founded and was the Chief Product Officer of EVANA.AI. EVANA automatically classifies uploaded documents and files, sorts them, and extracts relevant content. EVANA AI integrates existing solutions and standardizes data streams.

My current practical work and research are in the field of HCI, PIM, GIM, applied AI/ML, document theory, document management, and philosophy of information.

I also do research on social change and change management in addition to technical research topics. I am particularly interested in how to keep work meaningful for people with or in spite of increasing automation.

I hold a BA in Business Administration and a Master of Laws degree from the University of Münster, Germany.
